

Create a web based application for mobile car-wash

Tech Stack:

Front-end : Any

Back-end : Any

Db : Any

Types of Users:

User

Admin

User Use cases:

- login
- signup
- search based on place
- booking based on the availability of day (5 per day)
- get the booking status (success, pending , rejected )
- logout

Admin Use Cases

- login (for admin use separate UI)
- Add places
- Add services (water wash and basic services)
- view all the bookings, filter based on place and date
- accept/reject booking

*Pls commit your code to GitHub.*
